

1

The Earth, as a habitat for animal life, is in old age and has a fatal illness. Several, in fact. It would be happening whether humans had ever evolved or not. But our presence is like the effect of an old-age patient who smokes many packs of cigarettes per day — and we humans are the cigarettes.

The heatmap displays the relationship between 'Age' and 'Gender' for the variable 'Married'. The color scale ranges from 0.00 (light pink) to 1.00 (dark green). The heatmap shows that for most ages, the probability of being married is high (around 0.75 to 1.00). However, for the 'Age' group '18-24', the probability is significantly lower, around 0.25 to 0.50, and this probability increases with age.
